ATS TIMBER

ENVIRONMENTAL DECLARATION

ATS TIMBER has always strived to be environmentally friendly.

- From where we source our products with our Spruce being PEFC certified and our Pine being sustainably grown in New Zealand.
- We have markedly reduced emissions from transport as we source the majority of our products from our saw mill next door.
- With 90-95% of our Pine range coming from local forests and processed through our mill this allows us to keep a close eye on the environmental practices in the forestry and milling of our products. The remaining 5-10% is sourced from other like-minded mills with the same values.
- Our mill is always looking at ways it can do better environmentally such as recently putting in a new wood fired boiler for our kiln drying so that we have been able to move away from using fossil fuels (natural gas) and instead utilize our waste products – saw dust and wood shavings. Future projects we are looking into include using more renewable forms of power supply with solar panels and future upgrades to our treatment plants.
- We pride ourselves on making sure our products are right for your job first time to minimize waste.

ATS - always striving to do better for our customers and the environment
