ATS TIMBER

SUSTAINABILITY DECLARATION

ATS TIMBER has always strived to be at the forefront in using sustainable and renewable products:

- Whether it be our imported Spruce range, which are all PEFC certified and come from renewable plantations in Europe, or our Pine range which are 100% sourced from New Zealand renewable forestry.
- With predominantly 90-95% of our Pine range coming from our local mill and local forests we are able to keep a close watch on sustainability and environmental practices.
- The remaining 5-10% is sourced from other local mills with which we work closely and share the same values.

ATS TIMBER is not currently part of the FSC program as it is cost prohibitive for small/independent tree block owners, logging gangs and small mills. As ATS TIMBER puts an emphasis on supporting local communities and minimizing transport emissions (by getting logs locally) we could not join the FSC. Buying locally allows us to be able to monitor our logs personally to ensure sustainability.

ATS stands by our commitment to sustainability and guarantees our timber is grown and harvested in a sustainably and environmentally friendly manner.

ATS - here for you and generations to come
